

Features and Benefits

Disc Harrows

DH35 Series

Features	Benefits
Two working widths and several models to choose from	Designed to meet the operational and geographical needs of our customers.
Pull-type clevis hitch attachment for 45 to 80 hp tractors	Allows easy one person attachment to a wider range of lower priced new or used utility tractors.
High weight per blade concentration	Makes for easier disc penetration.
Heavy duty carrier frame and tongue construction	Provides for years of dependable service and performance.
Single pin release and lock on five position gang angling front and rear	Makes gang adjustments for less or more aggressive tillage an easy task.
Notched or smooth disc selection in 20" or 22" disc sizes	Lets customers choose a configuration that's just right for their tillage task.
Greasable triple sealed disc bearing	Provides for ease of service and longer bearing life.
Large transport tires with option of adding two more	Provides capability of road and field transport over tough surface conditions.
Hydraulic depth and transport control	Goes from working to transport position and back again with easy single tractor hydraulic control lever manipulation.
Front to rear leveling system	Provides uniform front to rear disc gang penetration.
Optional dirt Scrapers	Keeps discs from balling up with sticky mud.
Optional 18" and 20" furrow filler blades	Provides for more uniform finish on multiple pass applications.
Optional center sweep kit	Provides more consistent uniform finish between gangs.
Optional tongue jack	Assures easier hitch attachment to tractor.
2 Rear disc choices	Choose Notched or Smooth rear discs to achieve your desired finish.
