

Solid advantages in seed placement.

If you are in the seeding business, Land Pride's 8' Primary Seeder offers versatility to seed just about any job you have to do. If you are a landscaper, sod grower or farmer, we can seed most types of turfgrass and crops. If you grain farm or work in highway reclamation, we can seed Alfalfa and nearly all types of Native Grasses. By utilizing smaller bushel seedboxes added to the main box, it is possible to seed three different types of seed at different rates.

PS20 & PSN20 SERIES

Cat. 2 and 3, or Pull-type — 8'

- Cat. 2 & 3, Quick-Hitch adaptable or pull-hitch
- All-welded seedbox construction
- Water-tight lids to keep seed dry
- Large seedbox capacities
- Aggressive agitators in main box for consistent seeding rates
- Wind guarded seed drop
- Cast iron packer wheels promote seed-to-soil contact
- Spring loaded rear packer wheels
- #40 Roller chain
- 4 speed transmission for precise seed rates on PSN
- Optional small seeds box

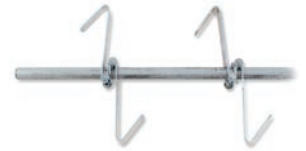

The picker wheel feed design in the Native Grass Seedbox is aggressive enough to feed fluffy, native grass blends like Big Blue Stem, Indian Grass, and Side Oats Grama. This box comes standard with an agitator to keep seed moving toward the picker wheel, and to avoid bridging.

Spring tine track removes effectively scratch out the tracks from the tractor tires.

PSN MODEL

If the majority of your seeding is done with Native Grass or "fluffy" seeds like Big Blue Stem or Indian Grass, the main seedbox on the PSN2096 is equipped with an aggressive picker wheel feed design. An aggressive agitator also keeps seed moving towards the picker wheel to keep seeding rates consistent.

A pull-hitch is available for the 20 Series Primary Seeders. This pull-hitch has wheels incorporated into it, rather than being part of the seeder, making it more compatible with smaller tractors.

A 4-speed gearbox and quick sprocket change is used on the PSN to change seeding rates. The large cup must remain open for the fluffy seed. This method of adjusting seed rates is to regulate the speed of the picker wheel inside the cup.

PS MODEL

The main seedbox on the PS series is equipped with our standard fluted seed cups and agitation to seed most turf type grasses, as well as a variety of other seeds from peas to alfalfa. With the ability to hold up to 8 bushels of seed, the PS2096 model is perfect for wide open landscape seeding, turf farms and some general farming.

Fluted seed cups meter the desired amount of seed every time. Seed cups are driven off the front roller.

The simple chain drive is easily accessible and delivers a constant, consistent flow of seeds through the seed cups.
