Disc Harrow
DH3510 & DH3512

322-251M
Operator’s Manual

Read the Operator’s Manual entirely. When you see this symbol, the subsequent instructions and warnings are serious - follow without exception. Your life and the lives of others depend on it!

Cover photo may show optional equipment not supplied with standard unit.
For an Operator’s Manual and Decal Kit in French or Spanish Language, please see your Land Pride dealer.
Machine Identification

Record your machine details in the log below. If you replace this manual, be sure to transfer this information to the new manual.

If you, or the dealer, have added Options not originally ordered with the machine, or removed Options that were originally ordered, the weights and measurements are no longer accurate for your machine. Update the record by adding the machine weight and measurements provided in the Specifications & Capacities Section of this manual with the Option(s) weight and measurements.

# Table of Contents

## Introduction
- Application: 7
- Using This Manual: 7
- Terminology: 7
- Definitions: 7
- Owner Assistance: 7
- Serial Number: 7
- Further Assistance: 7

## Section 1: Assembly & Set-up
- Tractor Requirements: 8
- Torque Requirements: 8
- Dealer Preparations: 8
- Tractor Shutdown Procedure: 8
- Single Wheel Assembly: 9
- Hitch Assembly: 9
- Hydraulic Cylinder Assembly: 10
- Reflector/Light Brackets: 11
- Swing Arm Assembly: 11
- Disc Gang Assembly: 12
- Disc Gang Positioning: 13
- Adjustment Lever Storage: 14
- Tractor Hook-up: 14
- Hook-up Hydraulics: 15
- Purge Hydraulic System: 15
- LED Light Kit Assembly: 16
- Hook-up LED Lights: 17

## Section 2: Optional Equipment Set-up
- Disc Scrapers: 18
- Scraper Assembly: 18
- Furrow Filler Assembly: 20
- Furrow Scraper Assembly: 20
- Center Sweep Assembly: 20
- Park Jack Assembly: 20
- Dual Wheel Assembly: 21
- Slow Moving Vehicle Sign: 21

## Section 3: Adjustments
- Out-of-Field Adjustments: 22
- Side to Side Leveling: 22
- Front to Rear Leveling: 22
- Disc Gang Angle Adjustment: 22
- Disc Scraper Adjustments: 23
- In-Field Adjustments: 24
- Hydraulic Cylinder Depth Adjustment: 24
- Disc Gang Angle: 24
- Disc Leveling Front To Rear: 24
- Disc Blade Replacement: 25

## Section 4: Operating Procedures
- Operator’s Responsibilities: 25
- Transporting: 26
- Field Operating Instructions: 26
- Unhook Disc Harrow: 27
- General Operating Instructions: 27

## Section 5: Maintenance & Lubrication
- General Maintenance Information: 28
- Tractor Maintenance: 28
- Daily Operational Checks: 29
- Long-Term Storage: 30
- Lubrication Points: 31
- Hitch Pivot Points: 31
- Spring Adjuster Tube: 36
- Spring Washers: 39
- Axle Top Clamp Half: 39
- Axle Bottom Clamp Half: 39
- Disc Gang Hanger Bearings: 39
- Wheel Hub: 39

## Section 6: Specifications & Capacities

## Section 7: Features & Benefits

## Section 8: Troubleshooting

## Section 9: Torque Values Chart

## Section 10: Warranty

**Parts Manual QR Locator**

The QR (Quick Reference) code on the cover and to the left will take you to the Parts Manual for this equipment. Download the appropriate App on your smart phone, open the App, point your phone on the QR code and take a picture.

**Dealer QR Locator**

The QR code on the left will link you to available dealers for Land Pride products. Refer to Parts Manual QR Locator on this page for detailed instructions.
These are common practices that may or may not be applicable to the products described in this manual.

**Safety at All Times**

Careful operation is your best insurance against an accident.

All operators, no matter how much experience they may have, should carefully read this manual and other related manuals before operating the power machine and this implement.

It is the owner’s obligation to instruct all operators in safe operation.

▲ Thoroughly read and understand the “Safety Label” section, read all instructions noted on them.
▲ Do not operate the equipment while under the influence of drugs or alcohol as they impair the ability to safely and properly operate the equipment.
▲ The operator should be familiar with all functions of the tractor and attached implement, and be able to handle emergencies quickly.
▲ Make sure all guards and shields are in place and secured before operating implement.
▲ Keep all bystanders away from equipment and work area.
▲ Start tractor from the driver’s seat with hydraulic controls in neutral.
▲ Operate tractor and controls from the driver’s seat only.
▲ Never dismount from a moving tractor or leave tractor unattended with engine running.
▲ Do not allow anyone to stand between tractor and implement while backing up to implement.
▲ Keep hands, feet, and clothing away from power-driven parts.
▲ While transporting and operating equipment, watch out for objects overhead and along side such as fences, trees, buildings, wires, etc.
▲ Do not turn tractor so tight as to cause hitched implement to ride up on the tractor’s rear wheel.
▲ Store implement in an area where children normally do not play.

**Look For The Safety Alert Symbol**

The SAFETY ALERT SYMBOL indicates there is a potential hazard to personal safety involved and extra safety precaution must be taken. When you see this symbol, be alert and carefully read the message that follows it. In addition to design and configuration of equipment, hazard control, and accident prevention are dependent upon the awareness, concern, prudence, and proper training of personnel involved in the operation, transport, maintenance, and storage of equipment.

**Be Aware of Signal Words**

A Signal word designates a degree or level of hazard seriousness. The signal words are:

▲ **DANGER**

Indicates a hazardous situation that, if not avoided, will result in death or serious injury. This signal word is to be limited to the most extreme situations.

▲ **WARNING**

Indicates a hazardous situation that, if not avoided, could result in death or serious injury.

▲ **CAUTION**

Indicates a hazardous situation that, if not avoided, may result in minor or moderate injury.

**Safety Precautions for Children**

Tragedy can occur if the operator is not alert to the presence of children. Children generally are attracted to implements and their work.

▲ Never assume children will remain where you last saw them.
▲ Keep children out of the work area and under the watchful eye of a responsible adult.
▲ Be alert and shut the implement and tractor down if children enter the work area.
▲ Never carry children on the tractor or implement. There is not a safe place for them to ride. They may fall off and be run over or interfere with the control of the power machine.
▲ Never allow children to operate the power machine, even under adult supervision.
▲ Never allow children to play on the power machine or implement.
▲ Use extra caution when backing up. Before the tractor starts to move, look down and behind to make sure the area is clear.

**Tractor Shutdown & Storage**

▲ If engaged, disengage power take-off.
▲ Park on solid, level ground and lower implement to ground or onto support blocks.
▲ Put tractor in park or set park brake, turn off engine, and remove switch key to prevent unauthorized starting.
▲ Relieve all hydraulic pressure to auxiliary hydraulic lines.
▲ Wait for all components to stop before leaving operator’s seat.
▲ Use steps, grab-handles and skid-resistant surfaces when getting on and off the tractor.
▲ Detach and store implement in an area where children normally do not play. Secure implement using blocks and supports.
These are common practices that may or may not be applicable to the products described in this manual.

**Tire Safety**
- Tire changing can be dangerous and must be performed by trained personnel using the correct tools and equipment.
- Always maintain correct tire pressure. Do not inflate tires above recommended pressures shown in the Operator’s Manual.
- When inflating tires, use a clip-on chuck and extension hose long enough to allow you to stand to one side and NOT in front of or over the tire assembly. Use a safety cage if available.
- Securely support the implement when changing a wheel.
- When removing and installing wheels, use wheel handling equipment adequate for the weight involved.
- Make sure wheel bolts have been tightened to the specified torque.

**Transport Safely**
- Comply with state and local laws.
- Use towing vehicle and trailer of adequate size and capacity. Secure equipment towed on a trailer with tie downs and chains.
- Sudden braking can cause a towed trailer to swerve and upset. Reduce speed if towed trailer is not equipped with brakes.
- Avoid contact with any over head utility lines or electrically charged conductors.
- Always drive with load on end of loader arms low to the ground.
- Always drive straight up and down steep inclines with heavy end of a tractor with loader attachment on the “uphill” side.
- Engage park brake when stopped on an incline.
- Maximum transport speed for an attached equipment is 20 mph. DO NOT EXCEED. Never travel at a speed which does not allow adequate control of steering and stopping. Some rough terrains require a slower speed.
- As a guideline, use the following maximum speed weight ratios for attached equipment:
  - 20 mph when weight of attached equipment is less than or equal to the weight of machine towing the equipment.
  - 10 mph when weight of attached equipment exceeds weight of machine towing equipment but not more than double the weight.
- IMPORTANT: Do not tow a load that is more than double the weight of the vehicle towing the load.

**Use A Safety Chain**
- A safety chain will help control drawn machinery should it separate from the tractor drawbar.
- Use a chain with the strength rating equal to or greater than the gross weight of the towed implement.
- Attach the chain to the tractor drawbar support or other specified anchor location. Allow only enough slack in the chain to permit turning.
- Always hitch the implement to the machine towing it. Do not use the safety chain tow the implement.

**Practice Safe Maintenance**
- Understand procedure before doing work. Refer to the Operator’s Manual for additional information.
- Work on a level surface in a clean dry area that is well-lit.
- Use properly grounded electrical outlets and tools.
- Use correct tools and equipment for the job that are in good condition.
- Lower implement to the ground and follow all shutdown procedures before leaving the operator’s seat to perform maintenance.
- Allow equipment to cool before working on it.
- Disconnect battery ground cable (-) before servicing or adjusting electrical systems or before welding on implement.
- Do not grease or oil implement while it is in operation.
- Inspect all parts. Make certain parts are in good condition & installed properly.
- Replace parts on this implement with genuine Land Pride parts only. Do not alter this implement in a way which will adversely affect its performance.
- Remove buildup of grease, oil, or debris.
- Remove all tools and unused parts from equipment before operation.
These are common practices that may or may not be applicable to the products described in this manual.

Prepare for Emergencies
▲ Be prepared if a fire starts.
▲ Keep a first aid kit and fire extinguisher handy.
▲ Keep emergency numbers for doctor, ambulance, hospital, and fire department near phone.

Use Safety Lights and Devices
▲ Slow moving tractors, skid steers, self-propelled machines, and towed equipment can create a hazard when driven on public roads. They are difficult to see, especially at night. Use the Slow Moving Vehicle sign (SMV) when on public roads.
▲ Flashing warning lights and turn signals are recommended whenever driving on public roads.

Avoid Underground Utilities
▲ Dig Safe, Call 811 (USA). Always contact your local utility companies (electrical, telephone, gas, water, sewer, and others) before digging so that they may mark the location of any underground services in the area.
▲ Be sure to ask how close you can work to the marks they positioned.

Wear Protective Equipment
▲ Wear protective clothing and equipment appropriate for the job such as safety shoes, safety glasses, hard hat, and ear plugs.
▲ Clothing should fit snug without fringes and pull strings to avoid entanglement with moving parts.
▲ Prolonged exposure to loud noise can cause hearing impairment or hearing loss. Wear suitable hearing protection such as earmuffs or earplugs.
▲ Operating equipment safely requires the operator’s full attention. Avoid wearing headphones while operating equipment.

Avoid High Pressure Fluids Hazard
▲ Escaping fluid under pressure can penetrate the skin causing serious injury.
▲ Before disconnecting hydraulic lines or performing work on the hydraulic system, be sure to release all residual pressure.
▲ Make sure all hydraulic fluid connections are tight and all hydraulic hoses and lines are in good condition before applying pressure to the system.
▲ Use a piece of paper or cardboard, NOT BODY PARTS, to check for suspected leaks.
▲ Wear protective gloves and safety glasses or goggles when working with hydraulic systems.
▲ DO NOT DELAY. If an accident occurs, see a doctor familiar with this type of injury immediately. Any fluid injected into the skin or eyes must be treated within a few hours or gangrene may result.

Use Seat Belt and ROPS
▲ Land Pride recommends the use of a CAB or roll-over-protective-structures (ROPS) and seat belt in almost all power machines. Combination of a CAB or ROPS and seat belt will reduce the risk of serious injury or death if the power machine should be upset.
▲ If ROPS is in the locked-up position, fasten seat belt snugly and securely to help protect against serious injury or death from falling and machine overturn.

Keep Riders Off Machinery
▲ Never carry riders or use tractor to lift or transport individuals.
▲ There is not a safe place for a person to ride.
▲ Riders obstruct operator’s view and interfere with the control of the power machine.
▲ Riders can be struck by objects or thrown from the equipment.
Safety Labels

Your Disc Harrow comes equipped with all safety labels in place. They were designed to help you safely operate your implement. Read and follow their directions.

1. Keep all safety labels clean and legible.
2. Refer to this section for proper label placement. Replace all damaged or missing labels. Order new labels from your nearest Land Pride dealer. To find your nearest dealer, visit our dealer locator at www.landpride.com.
3. Some new equipment installed during repair requires safety labels to be affixed to the replaced component as specified by Land Pride. When ordering new components make sure the correct safety labels are included in the request.
4. Refer to this section for proper label placement. To install new labels:
   a. Clean surface area where label is to be placed.
   b. Spray soapy water onto the cleaned area.
   c. Peel backing from label and press label firmly onto the surface.
   d. Squeeze out air bubbles with edge of a credit card or with a similar type of straight edge.

**WARNING**

**DO NOT EXCEED 20 MPH TRANSPORT SPEED TO PREVENT MACHINE DAMAGE LIMIT SPEED WHILE**
- TRANSPORTING
- TURNING
- IN WINDY CONDITIONS
- IN ROUGH TERRAIN

**838-588C**

Notice: 20 MPH Maximum Speed

**CAUTION**

To prevent injury or death:
- Read and understand Operator’s Manual before using.
- Lower implement, stop tractor engine, set park brake and remove ignition key before servicing, adjusting, repairing or unplugging.
- Do not allow riders.
- Keep others away during operation.
- Safely support and secure implement before repairs are made.

**818-719C**

Caution: General Instructions

**WARNING**

To Prevent Serious Injury or Death
- Avoid unsafe operation or maintenance.
- Do not operate or work on this machine without reading and understanding the operator’s manual.
- If manual is lost, contact your nearest dealer for a new manual.

**838-293C**

Warning: Read Manual
**Warning**: High Pressure Fluid Hazard

To prevent serious injury or death:
- Relieve pressure on hydraulic system before servicing or disconnecting hoses.
- Wear proper hand and eye protection when searching for leaks. Use wood or cardboard.
- Keep all components in good repair.

**818-831C**
Warning: High Pressure

---

**838-615C**
2” x 9” Amber Reflector (2 places)

**838-614C**
2” x 9” Red Reflector (2 places)

**838-603C**
2” x 9” Orange Reflector (2 places)
**Important Safety Information**

**848-247C**

Warning: Crushing Falling Blade Hazard

---

**838-093C**

Warning: Sharp Object Hazard
Introduction

Land Pride welcomes you to the growing family of new product owners. This Disc Harrow has been designed with care and built by skilled workers using quality materials. Proper assembly, maintenance, and safe operating practices will help you get years of satisfactory use from this Disc Harrow.

Application

The Land Pride DH3510 ten foot and DH3512 twelve foot pull-type discs are perfectly matched for agricultural utility tractors having 45 to 100 drawbar horsepower. They have applications in seed bed preparation, soil pulverization, and tillage on smaller farms, ranches, construction sites, race tracks, rodeo grounds, nurseries, reclamation sites, and sod farms. Economy conscious customers will find them more than equal to just about any soil cultivation task you can throw at them. With choices of notched or smooth 20” or 22” discs mounted on fore and aft gangs that have easily adjustable angling, the DH3510 and DH3512 readily adapt to a wide range of tillage conditions.

See “Specifications & Capacities” on page 39 and “Features & Benefits” on page 39 for additional information and performance enhancing options.

Using This Manual

• This Operator’s Manual is designed to help familiarize the operator with safety, assembly, operation, adjustments, troubleshooting, and maintenance. Read this manual and follow the recommendations to help ensure safe and efficient operation.

• The information contained within this manual was current at the time of printing. Some parts may change slightly to assure you of the best performance.

• To order a new Operator’s or Parts Manual, contact your authorized dealer. Manuals can also be downloaded, free-of-charge, from our website at www.landpride.com

Terminology

“Right” or “Left” as used in this manual is determined by facing the direction the machine will operate while in use unless otherwise stated.

Definitions

IMPORTANT: A special point of information related to the following topic. Land Pride’s intention is this information must be read & noted before continuing.

NOTE: A special point of information that the operator should be aware of before continuing.

Owner Assistance

The dealer should complete the Online Warranty Registration at the time of purchase. This information is necessary to provide you with quality customer service.

Serial Number

For quick reference and prompt service, record model and serial number on the inside cover page and again on the warranty page. Always provide model number and serial number when ordering parts and in all correspondences with your Land Pride dealer. For location of your serial number plate, see Figure 1

Further Assistance

Your dealer wants you to be satisfied with your new Disc Harrow. If for any reason you do not understand any part of this manual or are not satisfied with the service received, the following actions are suggested:

1. Discuss any problems you have with your implement with your dealership service personnel so they can address the problem.

2. If you are still not satisfied, seek out the owner or general manager of the dealership, explain the problem, and request assistance.

3. For further assistance write to:

Land Pride Service Department
1525 East North Street
P.O. Box 5060
Salina, Ks. 67402-5060

E-mail address
lpservicedept@landpride.com
Tractor Requirements

Tractor horsepower and weight must be capable of controlling the Disc Harrow under all operating conditions. Smaller horsepower and lighter weight tractors must not be used.

- **DH3510 Model**
  - Horsepower: 45-100 hp
  - Hitch Type: Drawbar
  - Hydraulic Outlets: 2 duplex outlets

- **DH3512 Model**
  - Horsepower: 55-100 hp
  - Hitch Type: Drawbar
  - Hydraulic Outlets: 2 duplex outlets

**WARNING**

To avoid serious injury or death:

Lightweight tractors with rear attached implements may need weights added to the front to maintain steering control and prevent serious injury or death. Consult your tractor Operator’s Manual to determine proper weight requirements and maximum weight limitations.

Torque Requirements

Refer to “Torque Values Chart for Common Bolt Sizes” on page 38 to determine correct torque values when tightening hardware during assembly and maintenance.

Dealer Preparations

Read and understand the Operator’s Manual. An understanding of how it works will aid in the assembly and setup.

Go through the “Assembly Checklist” on this page before assembling the Disc Harrow. Speed up your assembly task and make the job safer by having all needed parts and equipment readily at hand.

This harrow has been partially assembled at the factory. However, there are still some assembly requirements before the machine is ready for operation.

Assembly Checklist

<table>
<thead>

Tractor Shutdown Procedure

The following are basic tractor shutdown procedures. Follow these procedures and any additional shutdown procedures provided in your tractor Operator’s Manual before leaving the operator’s seat.

1. Reduce engine speed and disengage power take-off if engaged.
2. Park tractor and implement on level, solid ground.
3. Lower implement to ground or onto support blocks.
4. Put tractor in park or set park brake, turn off engine, and remove switch key to prevent unauthorized starting.
5. Relieve all hydraulic pressure to auxiliary hydraulic lines.
6. Wait for all components to come to a complete stop before leaving the operator’s seat.
7. Use steps, grab-handles and skid-resistant surfaces when getting on and off the tractor.
Section 1: Assembly & Set-up

Table of Contents

DH3510 & DH3512 Disc Harrow 322-251M

Section 1: Assembly & Set-up

**Hitch Assembly**

Refer to Figure 1-2:

1. Attach tongue (#5) to main frame (#3) with two 1"-8 x 4" GR5 cap screws (#8) & 1" nylocknut (#11). Draw nuts up snug. **Do not tighten.**

2. If included, rotate optional park jack (#22) to the upright position and retain with pin (#18). Extend jack to support hitch approximately 18" off the ground. Refer to “Park Jack Assembly” on page 20.

**NOTE:** Spring adjuster (#6) and pivot bracket (#7) are shipped shop assembled together.

3. Attach mid point of pivot bracket (#7) to the main frame (#3) with one 7/8" x 5 3/8" pin (#19) and two 3/16" x 1 1/2" cotter pins (#17). Bend one or both legs of cotter pins to prevent them from falling out.

4. Attach pivot bracket (#7) to tongue with lower hitch pin (#1) and 1/4" x 2" cotter pin (#15). Bend one or both legs of cotter pin.

5. Attach spring adjuster (#6) to axle lug (#4) with 3/4"-10 x 2 1/2" GR 5 cap screw (#9) and 3/4" top locknut (#12). Draw nut up snug. **Do not tighten.**

6. Insert 1/2"-13 x 1" GR5 hex head cap screw (#10) through 1/2" spring lock washer (#13), 1/2" flat washer (#14), spring hose loop (#20), 1/2" flat washer (#14), and into welded nut on top of hitch frame as shown. Tighten bolt to the correct torque.

7. Mount the five stroke control spacers (#21) onto the spring adjuster (#6) storage rack.

8. Attach cylinder transport lock (#2) to spring adjuster gusset with 1/4" wire retaining pin (#16).

**Single Wheel Assembly**

Refer to Figure 1-1:

1. Unpack Disc Harrow from shipping crate.

2. Support main frame with a suitable lifting device.

3. Verify fit-up of spindle (#6) to support tube (#2) by assembling them without anti-seize lubricant.

4. Remove spindle from support tube and apply a thin coat of anti-seize lubricant on the unpainted spindle shaft and a thin coat to the inside entrance of the spindle support tube.

5. Insert spindle (#6) into support tube (#2) and secure with two 1/2"-13 x 3 1/4" GR5 cap screws (#3) and 1/2" locknuts (#5). Tighten nuts to the correct torque.

6. Mount wheel (#1) to hub with five 1/2"-20 lug nuts (#4). Tighten lug nuts to the correct torque.

7. Repeat steps 2 to 6 for the opposite side.

8. See “Dual Wheel Assembly” on page 21 for instructions on installing optional dual wheels.

**IMPORTANT:** A forklift or adequate lifting devise is recommended for lifting the main frame when installing wheels, hitch, and hydraulic cylinder.
Hydraulic Cylinder Assembly

DANGER
To avoid serious injury or death:
Hydraulic fluid under high pressure will penetrate the skin and/or eyes causing a serious injury. Wear protective gloves and safety glasses or goggles when working with hydraulic systems. Use a piece of cardboard or wood rather than hands when searching for leaks. A doctor familiar with this type of injury must treat the injury within a few hours or gangrene may result. DO NOT DELAY.

Refer to Figure 1-3:

1. Position hydraulic cylinder (#3) with ports on top as shown. Install two 90 degree elbows (#4) into the cylinder ports with elbow fittings facing forward. Tighten elbows in cylinder as needed.
2. Screw 111" long hydraulic hose (#5) into the front elbow at cylinder base end and tighten.
3. Screw 123" long hydraulic hose (#7) into the rear elbow at cylinder rod end and tighten.
4. Thread adapter fittings (#6) onto the other end of the hydraulic hoses and tighten.
5. Purge hydraulic cylinder of air before continuing.
   a. Place hydraulic cylinder near a hydraulic power source on the ground in an area where it can be extend and retract freely.
   b. Connect hydraulic hoses to a power source.
   c. Fully extend & retract cylinder two or more cycles until cylinder rod moves in and out smoothly.
   d. Refer to “Purge Hydraulic System” on page 15 if cylinder will not move smoothly.
6. Attach hydraulic cylinder base to the main frame lug with 1" x 2 3/4" clevis pin (#1). Make sure hydraulic ports are positioned on top and cylinder base positioned to the front as shown.
7. Secure clevis pin with cotter pin (#2). Bend one or both legs of cotter pin.
8. Route hydraulic hoses through pivot bracket (#9) and spring hose loop (#8).
9. Adjust fittings on cylinder as needed to prevent wear on outside of hose due to any frame contact.
10. Connect hydraulic hoses to a power source and extend cylinder until holes in the rod clevis align with axle lug hole.
11. Attach cylinder rod to axle frame with 1" x 2 3/4" clevis pin (#1) and cotter pin (#2). Bend one or both legs of cotter pin.
Section 1: Assembly & Set-up

Table of Contents

DH3510 & DH3512 Disc Harrow 322-251M

11

Hydraulic Cylinder Transport Lock

Refer to Figure 1-4:
12. Fully extend hydraulic cylinder.
13. Remove transport lock (#1) from storage bar (#2) and pin to cylinder rod with wire retaining pin (#3).
14. Retract cylinder until weight of Disc Harrow is supported by the transport lock.

Reflector/Light Brackets

Refer to Figure 1-5:
1. Attach left-hand reflector bracket (#6) and right-hand right-hand reflector bracket (#7) to the disc frame with Red & Orange reflectors facing rearward using 1/2"-13 u-bolts (#13), flat washers (#11), and hex nylocknuts (#10).
2. Tighten nylocknuts (#1) to the correct torque.

Swing Arm Assembly

Refer to Figure 1-5:
1. Insert swing arms (#3A) through slots at rear of mainframe with pivot hole end in first and sharp object decal on the other end facing up.
2. Connect the two arms together at the center with two spacers (#1), one top slide bracket (#5), one bottom slide bracket (#2), two 3/4"-10 x 5" GR5 hex head bolts (#8), and two 3/4" locknuts (#9). Tighten locknuts to the correct torque.
3. Insert 1/2" spacer (#15) over rear pin located on the main frame.
4. Install end hole on stabilizer bar (#4) over rear pin and third hole back from the opposite end over top slide bracket pin.
5. Secure stabilizer bar with hairpin cotters (#12).
6. Apply a bead of silicone on the inside lip of the swing tube outer ends. Press end caps (#14) into tube ends.

NOTE: Bolt (#8) must be inserted into the left side of front slide bracket (#5) before positioning slide bracket under hydraulic lift cylinder.
7. Repeat steps 1 to 6 to install front swing arms (#3B).
Section 1: Assembly & Set-up

Disc Gang Assembly
Refer to Figure 1-6:

**WARNING**

To avoid serious injury or death:

- Be careful when working with Disc blades as the edges are sharp. Wear gloves when working around disc blades.
- Keep feet and other body extremities out from under the disc gangs to prevent serious injury or death from crushing or falling blade hazard.

**IMPORTANT:**

- Make sure swing arms (#1) are attached to the frame before attaching disc gangs (#2) to the arms. See “Swing Arm Assembly” on page 11.
- Disc gangs are provided in 7 1/2" & 9" spacing and with plain or notched disc blades. Check with your dealer to determine which disc gangs are mounted on the front and which are mounted on the back.
- Front disc gangs are mounted with concave side of disc blades facing out and rear disc gangs with concave side facing in.
- Do not install flat washers (#4) and locknuts (#3A) until installation of optional scrapers.

**NOTE:** If axle nut runs out of threads, order 3/8" thick washer # 322-345D from your nearest Land Pride dealer and install between end disc and casting.

Disc Gang Assembly (Model DH3512 with 9" disc Spacing Shown)

![Disc Gang Assembly Diagram]

**IMPORTANT:** U-bolts (#5) are longer for attaching optional scraper bars and are always located in the holes furthest away from the vertical leg of the disc gang mounting brackets.

1. Start with the rear disc gangs. Position them under the rear swing arms.
2. Lower the disc frame swing arms within close proximity of the mounting brackets as follows:
   - **Method #1:** Use the hydraulic cylinder to raise and lower the swing arms.
   - **Method #2:** Raise the front of the disc up to lower the rear swing arms and raise the back of the disc up to lower the front swing arms.
3. Align disc gangs with swing arms and then drop u-bolts over the swing arms into the mounting bracket holes. Take care to make sure the long u-bolts are mounted in the holes located farthest from the mounting bracket’s vertical leg.
4. Continue lowering the swing arms until they are touching the mounting bracket flanges.
5. Install 3/4" hex flange top locknuts (#3B) to the short u-bolts (#6). Draw nuts up loosely. Do not tighten.
6. Repeat steps 1 to 5 to attach the front disc gangs to the front swing arms.
Disc Gang Positioning
Refer to Figure 1-7 & Figure 1-8:
You must know the Disc Harrow model number and distance between disc blades (7 1/2" or 9") to position disc gangs on the swing arms correctly.

1. Measure distance between disc blades. Use this measurement to find dimensions A & B in the “Positioning Chart” below. Dimensions A & B are the distances from end of swing arms to end of the first inside mounting bracket flange (#1).

2. Make a pencil mark (Dimensions A & B) on the swing arm where the end of the mounting bracket flange begins.

3. Move disc gang along the length of the swing arm until end of inside mounting bracket flange is aligned with the pencil mark made on the swing arm.

4. Tighten the short u-bolt (#6) for the inside mounting bracket (#1) to 170 ft-lbs. Do not attach nuts (#3A) to the long u-bolts.

5. Move out to the next mounting bracket. Align this bracket vertically and then tighten short u-bolt to 170 ft-lbs.

6. Continue moving out while aligning the mounting brackets vertically and then tightening the short u-bolts until all brackets have been secured.

7. Refer to “Disc Scrapers” & “Scraper Assembly” on page 18 if optional disc scrapers are included. Skip to step 8 if they are not included.

8. Install two flat washers (#4) and 3/4" hex flange top locknuts (#3A) to each leg of the long u-bolts (#5). Tighten nuts to 170 ft-lbs.

Positioning Chart

<table>
<thead>
<tr>
<th>Distance From End of Swing Arm to End of Mounting Bracket Flange</th>
<th>Model DH3510 Disc Spacing</th>
<th>Model DH3512 Disc Spacing</th>
</tr>
</thead>
<tbody>
<tr>
<td>See Figure 1-7</td>
<td>A 7 1/16&quot;</td>
<td>7 1/2&quot;</td>
</tr>
<tr>
<td>See Figure 1-8</td>
<td>B 8 7/8&quot;</td>
<td>9 1/2&quot;</td>
</tr>
</tbody>
</table>

Important: Make sure all mounting bracket legs are vertical before tightening short u-bolts. This will ensure that the long u-bolts are spaced properly when mounting scraper channels.
Adjustment Lever Storage
Refer to Figure 2-10 on page 22:
Store adjustment lever (#6) in a suitable location. One location would be pinned under stabilize bar (#8) with hairpin cotter (#7) as shown. If disc gang is angled such that pinning the bar in front does not work, then try pinning it behind.

Tractor Hook-up

**DANGER**
To avoid serious injury or death:
- A crushing hazard exists while hooking-up and unhooking implement. Keep people and animals away while backing-up to implement or pulling away from implement. Do not operate hydraulic controls while a person or animal is directly behind the power machine or near the implement.
- Always shut tractor down using “Tractor Shutdown Procedure” provided in this manual before dismounting the tractor.

**WARNING**
To avoid serious injury or death:
Jack must be installed on the hitch and jack attachment pin must be fully inserted and secured before working on or around an implement not hooked to the tractor drawbar.

Refer to Figure 1-9:
1. Make certain park jack (#6) is properly attached to implement hitch mount (#5) and secured with detent pin (#7).
2. Pivot clevis hitch (#3) up horizontally and support in this position with wire retaining pin (#4).
3. Start tractor and raise lower 3-point arms fully up. Back tractor within close proximity of clevis (#3).
4. Raise or lower park jack (#6) to align clevis (#3) with tractor drawbar. Drawbar should fit between lower and upper plates of clevis.
5. Back tractor up to implement hitch clevis (#3) until holes in drawbar and clevis are aligned.
6. Remove wire retaining pin (#4) and store in a safe place for future use.
7. Insert 1 1/4" flat washers (#9 & #10) equally above and below tractor drawbar until both spaces between drawbar and clevis plates are filled. This will reduce drawbar wear.
8. Insert 1 1/4" -7 x 6 1/2" GR5 hex bolt (#2) through bottom clevis hole, 1 1/4" washers (#9), tractor drawbar, remaining 1 1/4" washers (#10) and out through upper clevis hole. Secure hex bolt with hex nut (#13) and jam nut (#14). Tighten hex nut snugly to remove all play and then back nut one-quarter turn. Tighten Jam nut (#14) tight against hex nut (#13).
9. Lower park jack (#6) until implement weight is removed from park jack. Rotate park jack counterclockwise 90 degrees and reinsert detent pin (#7) for storage.
10. Attach hitch safety chain (#1) to tractor. Adjust chain length to remove all slack except what is necessary to permit turning. Lock chain hook securely to the safety chain.
11. Pin tractor drawbar in fixed center position.
Hook-up Hydraulics
The standard set-up requires one duplex outlet to operate the two-way lift cylinder.

Refer to Figure 1-9 on page 14:

1. If not already completed, route hydraulic hoses (#12) through hose spring support loop (#15).
2. Connect quick release coupler on end of hydraulic hoses (#12) to tractor remote outlet.
3. Start tractor and operate control lever to raise and lower Disc Harrow. If the implement works opposite of what it should, shut tractor down and switch hydraulic hose connections at the duplex outlet. Refer to “Tractor Shutdown Procedure” on page 8.
4. Cycle lift cylinder back and forth several times to purge air from it. If operation continues to be sluggish, it may be necessary to purge air from the cylinder and hydraulic lines. Refer to “Purge Hydraulic System” below.

Purge Hydraulic System

⚠️ DANGER

To avoid serious injury or death:
Hydraulic fluid under high pressure will penetrate the skin and/or eyes causing a serious injury. Wear protective gloves and safety glasses or goggles when working with hydraulic systems. Use a piece of cardboard or wood rather than hands when searching for leaks. A doctor familiar with this type of injury must treat the injury within a few hours or gangrene may result. DO NOT DELAY.

1. Shut tractor down and relieve all hydraulic pressure before dismounting. Refer to “Tractor Shutdown Procedure” on page 8.
2. With implement lowered to the ground, remove connecting pin from rod end of cylinder. Block cylinder support in a vertical position with rod end up.
3. Cycle hydraulic system to extend and retract cylinder. Repeat this process 2 times ending with cylinder fully retracted.
4. Shut tractor down and relieve all hydraulic pressure before dismounting.
5. Crack fitting at the rod end of cylinder to allow air to escape.
6. Restart tractor and slowly activate tractor control lever to extend the cylinder rod until air free oil leaks from the fitting.
7. Follow tractor shutdown procedures before dismounting tractor.
8. Tighten fitting on the rod end of cylinder.
9. Pin clevis on rod end of cylinder to the Disc Harrow.
10. Crack fitting at the base end of the cylinder and repeat steps 6-8.
11. Tighten fitting on base end of cylinder.
12. Slowly cycle Disc Harrow to transport position while checking to make sure hydraulic hoses are not pinched in the process.
LED Light Kit Assembly

**Refer to Figure 1-10:**
The lead wiring harness (#4) is equipped with a 7-way round pin connector. Make sure your tractor is equipped with the 7-pin electrical outlet shown in Figure 1-11 on page 17.

1. Lower Disc Harrow until discs and wheels are resting on the ground.

**IMPORTANT:** Amber lights “A” are located outside facing front and back. Red lights “B” are located inside facing back only.

3. Mount right-hand light (#6) on top of the right-hand reflector bracket (#15) as shown with Red light facing back and to the inside.
   a. Secure light assembly (#6) with 1/4"-20 x 1" GR 5 hex bolts (#7), flat washers (#8) and nylock nuts (#9) as shown.
   b. Tighten nylock nuts (#9) to the correct torque.
4. Mount left-hand light (#5) on top of the left-hand reflector bracket (#16) as shown with Red light facing back and to the inside.
   a. Secure light assembly (#5) with 1/4"-20 x 1" GR 5 hex bolts (#7), flat washers (#8) and nylock nuts (#9).
   b. Tighten nylock nuts (#9) to the correct torque.
5. Attach enhance module (#3) to the mainframe as shown with #10-24 x 1" cap screws (#10) and nylock nuts (#11). Tighten nylock nuts.

**IMPORTANT:** Connectors on wire harness (#1 & #2) are labeled “Light” on one end and “Enhancer” on the other end. Ends labeled “Light” connect to the light assemblies (#5 & #6). Ends labeled “Enhancer” connect to enhance module (#3).

6. Plug “Light” connector (#1B) on the right-hand side to connector (#1A) for LED light (#6).
7. Plug “Light” connector (#2B) on the left-hand side to connector (#2A) for LED light (#5).
8. Route wire harnesses (#1 & #2) on both sides of the mainframe to the front and along the front beam to enhance module (#3).

**IMPORTANT:** See Detail A: Connector (#1D) has a Red wire and connects to wire harness (#1) on the right side. Connector (#2D) has a yellow wire and connects to wire harness (#2) on the left side.

9. **See Detail A:** Plug wire harnesses (#1, #2, & #4) to enhance module (#3) as follows:
   a. On the right side, plug “Enhance” connector (#1C) to connector (#1D). Connector (#1D) has a Red wire.
   b. On the left side, plug “Enhance” connector (#2C) to connector (#2D). Connector (#2D) has a Yellow wire.
Section 1: Assembly & Set-up

Hook-up LED Lights
Refer to Figure 1-10 on page 16:

1. Route lead wire harness (#4) through spring hose loop (#12).
2. Connect wire harness (#4) to the tractor’s 7-way round pin receiver. See Figure 1-11 above.
3. Start tractor and operate lights to verify hook-up is operating properly:
   a. Turn on head lights to verify Red lights illuminate.
   b. Turn on flasher lights to verify Amber light are blinking on and off.
4. If lights did not operate properly, recheck hook-up of wire harnesses (#1, #2, & #4). Make necessary changes to the harnesses and repeat step 3 above.
5. Recheck routing of wire harnesses to make sure they will not pinch as the Disc Harrow is raised and lowered.
6. Make final adjustments to harnesses (#1, #2, & #4) and cable ties (#13) as needed. When completed, draw all cable ties up tight.
Disc Scrapers

Refer to Figure 2-1:
Orient disc scrapers as shown in Figure 2-1 to determine scraper types.

The bottom of Type “A” is skewed up to the left and mounted on the back right and front left disc gangs.

The bottom of Type “B” is skewed up to the right and mounted on the back left and front right disc gangs.

Scraper Assembly

Refer to Figures 2-2, 2-3, 2-4 & 2-5:

1. Determine correct orientation of scraper mounting brackets (#1) by locate the figure that illustrates your Disc Harrow model number and disc blade spacing. Be sure to check the disc blade spacing on both the front and rear disc gangs as they can be different. Mounting brackets for disc gangs with 7 1/2" blade spacing will have more square holes than ones with 9" blade spacings.

2. Select the correct mounting bracket (#1) for the back right disc gang and then orient the square bolt holes in the mounting bracket to match the square bolt holes in the mounting bracket shown in the illustration.

IMPORTANT: Disc scrapers (#5) must point in towards the disc concave surfaces. Hex head square neck bolts (#7) can be inserted from the bottom or top when attaching disc scrapers.

3. Bolt Type “A” disc scrapers to scraper mounting bracket (#1) with 1/2"-13 x 1 1/4" GR5 round head square neck bolts (#7) and 1/2" hex flange lock nuts (#8). Draw nuts up snug. Do Not tighten.

4. Attach scraper hangers (#6) to the long u-bolts (#4) with 3/4" flat washers (#3) and 3/4" hex flange locknuts (#2). Draw nuts up snug. Do not tighten.

5. Attach scraper mounting bracket (#1) to scraper hangers (#6) with 1/2"-13 x 1 1/4" GR5 round head square neck bolts (#7) and 1/2" hex flange lock nuts (#8). Draw nuts up snug. Do not tighten.

6. Recheck fit-up of the scraper assembly and then tighten u-bolt hex flange nuts (#2) and scraper hanger locknuts (#8) to the correct torque.

7. Adjust individual scrapers (#5) to be within close contact without touching the disc blade. Tighten scraper mounting nuts (#8) to the correct torque. See “Disc Scraper Adjustments” on page 23 for detailed scraper adjustment instructions.

8. Repeat steps 2 - 7 for the front right scraper assembly with Type “B” scrapers.

9. Repeat steps 2 - 7 for the back left scraper assembly with Type “B” scrapers.

10. Repeat steps 2 - 7 for the back right scraper assembly with Type “B” scrapers.
Section 2: Optional Equipment Set-up

Model DH3512 Disc Harrow With Blades Spaced 9" Apart
Figure 2-5
**Furrow Filler Assembly**

*Refer to Figure 2-6:*
1. Attach furrow filler (#1) to the right back end disc with 5/8"-11 x 2" GR5 round head square neck bolt (#4), spring lock washers (#9) and 5/8" hex nut (#8).
2. Tighten nuts to the correct torque.
3. Repeat steps 1 & 2 for the left side.

**Furrow Scraper Assembly**

*Refer to Figure 2-6:*
1. Remove existing 1/2" x 1 1/4" round head bolt (#6), hex nut (#7B) and end scraper (#10). Keep scraper for reuse.
2. Attach right furrow scraper (#3) and end scraper (#10) to scraper bar with new 1/2"-13 x 1 1/2" GR5 round head square neck bolt (#5) and 1/2" hex locknut (#7A). Make sure furrow scraper is positioned above the end scraper as shown.
3. Tighten nut to the correct torque.
4. Repeat steps 1, 2 & 3 for the left side furrow scraper.
5. Adjust individual scrapers to be within close contact with disc concave surfaces without touching. See “Disc Scraper Adjustments” on page 23.

**Center Sweep Assembly**

*Refer to Figure 2-7:*
1. Attach sweep arm (#2) to the main frame at about mid point between the front disc gangs and rear disc gangs with two 5/8"-11 x 4 1/32" x 4 3/4" u-bolts (#7), spring bracket (#1), and hex flange locknuts (#5).
2. Tighten locknuts to the correct torque.
3. Mount center sweep (#8) to the sweep arm in the lowest position if disc blades are 22" in diameter. Mount in the highest position if disc blades are 20" in diameter. Use 7/16"-14 x 1 3/4" GR3 plow bolts (#3), lock washers (#6), and hex nuts (#4) when mounting.

**Park Jack Assembly**

*Refer to Figure 2-8:*
1. Attach park jack (#22) to jack pivot bracket with detent pin (#18). Screw park jack up and down to position tongue (#5) at the correct hook-up height.
2. Pull pin and rotate park jack counterclockwise 90° and reinsert pin for transporting.
**Dual Wheel Assembly**  
*Refer to Figure 2-9:*

1. Support main frame off the floor with a suitable lifting device.
2. Install single bolt-on spindle (#6) to inside of axle frame (#2) with two 1/2"-13 x 3 1/4" GR5 hex head cap screws (#3) and 1/2" hex locknuts (#5). Tighten nuts to the correct torque.
3. Mount wheel (#1) to hub (#7) with five 1/2"-20 lug nuts (#4). Tighten lug nuts to the correct torque.
4. Repeat steps 2 to 6 for the opposite side.

**Slow Moving Vehicle Sign**  
*Refer to Figure 2-10:*

Attach slow moving vehicle sign (#2) to the back of the frame (#1) with 1/2"-13 x 3 1/32" x 5" u-bolt (#5), spring lock washers (#4) and 1/2" hex nuts (#3). Tighten nuts to the correct torque.
Section 3: Adjustments

Out-of-Field Adjustments
Some adjustments can be made on concrete slabs or on a good level surface.

Side to Side Leveling
Check tire pressure. All tires should have equal pressure. See “Tire Inflation Chart” on page 38. Unequal tire pressure will allow the disc to dig in deeper on the side with the lowest tire pressure. This will make the Disc Harrow pull at an angle to the direction of travel.

Front to Rear Leveling
Refer to Figure 3-1:

WARNING
To avoid serious injury or death:
• Total compressed length of leveling springs (#3) is 12 1/2” between flat washers. Never adjust nuts (#4) to compress springs under 12 1/2”. Compressing springs too tight can damage the spring adjuster resulting in flying projectiles and sudden drop of the Disc Harrow.
• Do not fully unscrew spring adjuster rod (#5) from adjuster tube (#6). Unscrewing the rod will result in a sudden drop of the front disc gangs. Maximum allowable exposed rod (#5) between nuts (#4) and adjuster tube (#6) is 15”.

Most operating problems are due to unequal pressure and penetration of the front and rear gangs. Preset the harrow with the rear disc blades almost touching the ground and the front disc blades approximately 2 inches off the ground as follows:

Refer to Figure 3-1:
1. Turn spring adjuster to position the front disc blades approximately 2 inches above the rear disc blades as follows:
   • Turn spring adjuster (#2) clockwise with adjusting lever (#1) to lower the rear disc blades.
   • Turn spring adjuster (#2) counterclockwise with adjusting lever (#1) to raise the rear disc blades.

Disc Gang Angle Adjustment

CAUTION
To avoid minor or moderate injury:
Refer to Figure 3-2. Keep everyone clear of swing arm hanger brackets while adjusting disc gang angles. Body extremities can become pinched in the bracket openings.

Refer to Figure 3-7 on page 24:
1. Lower Disc Harrow until rear disc blades are almost touching the ground. Raise implement slightly and then add stroke control spacers (#4 & #5) to the cylinder rod until rod is full.
2. Lower machine until cylinder is pressing against the stroke control spacers.

Refer to Figure 3-3:
Make adjustments with disc gangs off the ground:
1. Remove hairpin cotters (#1) from rear gang slide mount.
2. Remove stabilizing bar (#2) from pin (#3).
3. Place hole in adjusting lever (#4) over pin (#3). Make sure pin (#5) on adjusting lever is facing up.
4. Place one of the holes in stabilizing bar (#2) over pin (#5).
Section 3: Adjustments

Refer to Figure 3-4 & Figure 3-5:

5. Determine which hole to select in the stabilizing bar when setting disc gangs to the desired angle.

Refer to Figure 3-3 on page 23:

6. Pull or push on lever handle (#4) to move disc gangs forward or rearward until selected hole in stabilizing bar aligns with pin (#3).
7. Remove adjusting lever (#4) and place stabilizing bar (#2) on pin (#3).
8. Replace hairpin cotters (#1).
9. Repeat steps 1 to 8 for the front gangs.
10. Store adjusting lever under one of the stabilizing bars when completed. Make sure all hairpin cotters (#1) have been replaced.

Disc Scraper Adjustments

Refer to Figure 3-6 (Right Rear Disc Gang):

NOTE: Rear furrow filler scraper (#2) is optional and may not be included with your Disc Harrow.

1. Loosen bolt (#1) and adjust furrow filler scraper (#2) and scraper (#4A) as close to the disc blades as possible without touching.
2. Tighten 1/2" -13 GR5 carriage bolt #1 to the correct torque.

In-Field Adjustments

Final adjustments will need to be made while operating the Disc Harrow in the field. Make sure you have properly hooked-up to your tractor, lubricated the Disc Harrow, made a full bolt inspection, and completely read this manual before going to the field.

WARNING

To avoid serious injury or death:
• Wear gloves and be careful when working around or with Disc blades. The blade cutting edge is sharp.

IMPORTANT:
• Damage to the harrow can occur if it is not lifted out of the ground before making sharp turns.
• Make sure tractor drawbar is pinned in the center position and tractor 3-Point arms are positioned so that they will not make contact with the Disc Harrow hitch.
• The Disc Harrow tires can be raised off the ground to add weight to the disc gangs. However, DO NOT add any additional weight to the Disc Harrow in an attempt to make the disc blades sink into the ground deeper. Instead, make additional passes over the worked area.
• Each adjustment affects another. Therefore, make only one adjustment at a time and then test that adjustment before continuing.
• Make each trial run with tractor in the same gear and at the same speed. Varying tractor speed while making adjustments will only make adjusting the Disc Harrow harder.
Hydraulic Cylinder Depth Adjustment

Refer to Figure 3-7:

**IMPORTANT:** Because soil firmness varies from field to field, make depth adjustments while working in the field.

1. Remove all stroke control spacers (#4 & #5) from the hydraulic cylinder.
2. Lower Disc Harrow to desired working depth and travel forward. Your travel speed will be determined by soil conditions.
3. When working depth is achieved, stop tractor, shut tractor engine off, and remove switch key.
4. Select required size and number of stroke control spacers (#3) that will fit between hydraulic cylinder and rod eye clevis. The following spacers are available.
   - Two 1" spacers
   - One 1 1/4" spacer
   - One 1 1/2" spacer
   - One 1-1 3/4" spacer
5. Return to the tractor and raise the Disc Harrow up. Once fully raised, turn tractor engine off and remove switch key.
6. Install preselected stroke control spacers (shown as #4 & #5 in this example) on the cylinder rod.
7. Lower Disc Harrow against installed stroke control spacers. Recheck working depth. If needed, adjust size and quantity of stroke control spacers until desired working depth is achieved.

Disc Gang Angle

Increasing the disc gang angle will help the Disc Harrow to penetrate the soil and remove vegetation. However, too much angle can cause the Disc Harrow to operate erratically. Therefore, it is best if the disc gang angles are set at the smallest angle required to do the job. Make sure the angle of the front disc gangs is 3 degrees more than the rear disc gangs.

See also Section 8: Troubleshooting for helpful solutions to setting the disc gang angles.

Disc Leveling Front To Rear

Refer to Figure 3-1 on page 22:
The truest way to level your disc from front to rear is to observe behind the center of the Disc Harrow. In most soil conditions, a slight ridge in the center is actually a level operation. More air pockets will form where soil is thrown against each other, causing a small ridge to form that will disappear after a soaking rain.

1. If unit is leaving a significant ridge in the center, raise disc rear gangs by turning spring adjuster (#2) counterclockwise.
2. If unit is leaving a furrow (valley) in the center, lower the rear disc gangs by turning spring adjuster (#2) clockwise.
3. See also Section 8: Troubleshooting for helpful solutions to leveling the Disc Harrow.

Disc Blade Replacement

Refer to Figure 3-8:

When replacing notched disc blades, assemble the disc blades in a spiral pattern.

See note in Figure 1-6 on page 12: Order 3/8" thick washer(s) from your nearest Land Pride dealer if axle nut(s) runs out of threads before the disc blades are tight on the axle.
### Operator's Responsibilities

Hazard control and accident prevention are dependent upon the awareness, concern, prudence, and proper training involved in the operation, transport, storage, and maintenance of the Disc Harrow. It is absolutely essential that no one operates the harrow unless they are age 16 or older and have read, fully understood, and are totally familiar with the Operator’s Manual. Make sure the operator has paid particular attention to:

- **Important Safety Information**, page 1
- **Section 1: Assembly & Set-up**, page 8
- **Section 2: Optional Equipment Set-up**, page 18
- **Section 3: Adjustments**, page 22
- **Section 4: Operating Procedures**, page 25
- **Section 5: Maintenance & Lubrication**, page 28

Perform the following inspections before using your Disc Harrow.

#### Operating Checklist

<table>
<thead>
<tr>
<th>Check</th>
<th>Ref.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Read “Important Safety Information”</td>
<td>Page 1</td>
</tr>
<tr>
<td>Read all of the “Tractor Hook-up” and preparation instructions.</td>
<td>Page 14</td>
</tr>
<tr>
<td>Read “Section 4: Operating Procedures”</td>
<td>Page 25</td>
</tr>
<tr>
<td>Lubricate the harrow as needed. Refer to “Lubrication Points”.</td>
<td>Page 31</td>
</tr>
<tr>
<td>Check harrow initially and periodically for loose bolts &amp; pins. Pay special attention to disc gang hanger bolts and axle nuts. Refer to “Torque Values Chart”.</td>
<td>Page 38</td>
</tr>
</tbody>
</table>

### DANGER

**To avoid serious injury or death:**

- Do not allow anyone near the tractor or implement while operating. Stop operation if bystanders are too close. They can be hit by flying projectiles, become entangled in the equipment, or run over.
- Never carry riders on the implement or tractor. Riders can obstruct the operator’s view, interfere with control of the equipment, be pinched by moving components, become entangled in rotating components, be struck by objects, be thrown or fall from the equipment, etc.
- Never make contact with underground utilities such as electrical power lines, gas lines, phone lines, etc. They can cause serious injury or death from electrocution, explosion, or fire. If in doubt, call 811 (USA) before digging so that they can mark the location of underground services in the area. For contact information, see Dig Safe in the “Important Safety Information” starting on page 1.
- Always secure equipment with solid supports before working under it. Never go under equipment supported by concrete blocks or hydraulics. Concrete blocks can break, hydraulic lines can burst, and/or hydraulic controls can be actuated even when power to hydraulics is off.

### WARNING

**To avoid serious injury or death:**

- Allow only persons to operate this implement who have fully read and comprehended this manual, who have been properly trained in the safe operation of this implement, and who are age 16 or older. Serious injury or death can result from the inability to read, understand, and follow instructions provided in this manual.
- Do not use implement to lift objects; to pull objects such as fence posts, stumps, etc; or to push objects. The unit is not designed or guarded for these uses.
- Do not alter implement or replace parts on the implement with other brands. Other brands may not fit properly or meet OEM (Original Equipment Manufacturer) specifications. They can weaken the integrity and impair the safety, function, performance, and life of the implement. Replace parts only with genuine OEM parts.
- Perform scheduled maintenance. Check for loose hardware, missing parts, broken parts, structural cracks, and high wear. Make repairs before putting implement back into service. Serious breakdowns can result in injury or death.
- Keep everyone away from the Disc Harrow while raising, lowering, and transporting the implement to protect against falling blade hazard.
- Always make sure the tractor is shut off and no one is near the tractor when installing stroke control spacers and/or transport lock. Also, keep away from possible pinch points during installation as the hydraulic lines could burst dropping the unit suddenly.
- Do not use tires as a step or lean against them. They can suddenly move even when they appear to be solidly against the ground causing a falling hazard against metal protruding objects and sharp disc blades.
- Make sure safety labels are installed in their proper location and are in good condition before operating the attached implement. Read and obey all instructions on the labels.
- Pin drawbar in the fixed center position and make sure tractor 3-Point arms are positioned so that they will not make contact with the Disc Harrow hitch.
- Raise Disc Harrow out of the ground to make sharp turns. Do not turn tractor tires into the tongue or frame. Doing this can result in loss of control and/or damage the implement. Slow down and watch tractor tires carefully when forced to make sharp turns.
- Do not use implement to lift objects; to pull objects such as fence posts, stumps, etc; or to push objects. The unit is not designed or guarded for these uses.
- Do not use implement to tow other equipment unless it is designed with a tow hitch. Doing so can result in loss of control and damage the equipment.
Transporting

WARNING
To avoid serious injury or death:
When traveling on roadways, travel in such a way that other vehicles may pass you safely. Use LED lights, clean reflectors, and a slow moving vehicle sign that is visible from the back to warn operators in other vehicles of your presence. Always comply with all federal, state, and local laws.

Refer to Figure 4-1:
1. Raise Disc Harrow fully up with tractor hydraulic control lever.
2. Remove transport lock (#1) from storage bar (#2) and pin to cylinder rod with wire retaining pin (#3) to make transporting safe.

Field Operating Instructions

Final adjustments will need to be made while operating the Disc Harrow in the field. See "In-Field Adjustments" on page 24 for final adjusting instructions.

WARNING
To avoid serious injury or death:
Raise Disc Harrow out of the ground to make sharp turns. Do not turn tractor tires into the tongue or frame. Doing this can result in loss of control and/or damage the implement. Slow down and watch tractor tires carefully when forced to make sharp turns.

1. Raise unit out of the ground to make sharp turns. When making sharp turns, make sure the tractor tires do not make contact with the Disc Harrow hitch.
2. Do not disc in reverse (traveling backwards). The Disc Harrow is designed to work soil while traveling forward only. Damage to the harrow may occur.
3. Do not back Disc Harrow into corners and tight places with disc gangs down. Instead, lift unit up and back unit into the corner or tight area. Lower disc to the ground and then proceed forward.
4. It is best to work ground traveling with a ditch and not across. Raise Disc Harrow up to cross shallow ditches straight on at 90 degrees. Crossing a ditch on the diagonal can damage the disc and/or tractor especially if a disc gang on one side digs into the ground. Never cross deep ditches.

Unhook Disc Harrow

Unhook Disc Harrow from the tractor as follows:
1. Park on a level solid surface.
2. Remove all stroke control spacers from hydraulic cylinder and place on storage rack. Lower Disc Harrow until wheels are resting on the ground.
3. Place tractor gear selector in park, set park brake, shut tractor engine off, and remove switch key. Move cylinder lift lever back and forth to release hydraulic line pressure.
4. Rotate park jack on the tongue down and install detent pin to lock park jack in place. Set jack to desired height to maintain proper hook-up height.
5. Unhook hydraulic hoses from tractor and store hose ends on hydraulic hose loop.
6. Un-bolt hitch from tractor. Once tractor is clear of hitch, reinstall bolt, washers, and nuts to the Disc Harrow clevis hitch for safe keeping.
7. See “Long-Term Storage” on page 30 if Disc Harrow is to be stored for a long time.

NOTE: Disc Harrows with disc blades spaced 7 1/2” apart are primarily used to pulverize soil. They work best in tilled soil. Disc blades spaced 9” apart are recommended for cutting non-tilled soil.
General Operating Instructions

Before putting your Land Pride 35 Series Disc Harrow into service you must thoroughly review the Operator’s Manual. Once you have read the Operator’s Manual and properly attached your Land Pride Disc Harrow on your tractor drawbar, you should be ready to raise it into transport position and head for the work site. You should have already removed any sizeable tree limbs, rocks, or debris from this area. You might have already plowed this area previously in preparation for planting. Do not attempt to disc wet or mucky soil and all areas should be well drained and capable of being walked on without having the soil stick to your shoes.

Discing action will commence as soon as you lower the disc from transport position, the unit touches the ground, and tractor begins to move forward. Your travel speed forward will be determined by soil conditions and available tractor horsepower. Never try to disc in reverse and when you reach the end of a pass, raise the unit up into transport before turning. Trying to turn sharply with the unit in the ground will cause extreme side loading on the discs and may cause damage. Making disc gang adjustments is relatively easy by raising the disc off of the ground, pulling the locking pin, making the required gang angle adjustment, and then reverse the process till your back in action.

Ground conditions and the finish you require will determine how you position the angles of your front and rear disc gangs. Both of the front and rear disc gangs have five angle adjustment positions. The best ground finish will usually be achieved when the rear gang is set at a slightly lesser angle than the front gang. The more aggressive you set the angle of the gangs, the more aggressive the cutting action in the soil profile will be. The more aggressive the cutting action is, the more horsepower will be required to pull your unit. Achieving the desired effect may require a little experimentation in your given conditions. If the soil is building up on or sticking to your discs then the soil is too wet and discing operations should be discontinued until the ground is dry and more workable. Optional disc scrapers are recommended and will significantly improve overall performance in conditions where soil continually tends to buildup or stick to discs.

Once you are finished using your disc and you have traveled to your equipment storage area, lower it out of transport position parking it on a dry and level surface. Clean it, service it, and make it ready for the next use by replacing any parts that may have become excessively worn or damaged during field operation.

With a little practice you will be able to achieve excellent results from your Land Pride 35 Series Disc Harrow. See “Features and Benefits” section or “Specifications & Capacities” for additional information and performance enhancing options.
General Maintenance Information

The parts on your Disc Harrow have been specially designed and should only be replaced with genuine Land Pride parts. Do not alter the harrow in a way which will adversely affect its performance.

Proper servicing and adjustments are key to the long life of any implement. With careful inspection and routine maintenance, you can avoid costly downtime and repair.

Check all bolts after using the unit for several hours to be sure they are tight. Replace any worn, damaged, or illegible safety labels by obtaining new labels from your Land Pride dealer.

⚠️ DANGER

To avoid serious injury or death:

- Hydraulic fluid under high pressure will penetrate the skin and/or eyes causing a serious injury. Wear protective gloves and safety glasses or goggles when working with hydraulic systems. Use a piece of cardboard or wood rather than hands when searching for leaks. A doctor familiar with this type of injury must treat the injury within a few hours or gangrene may result. DO NOT DELAY.

- Always secure equipment with solid supports before working under it. Never go under equipment supported by concrete blocks or hydraulics. Concrete blocks can break, hydraulic lines can burst, and/or hydraulic controls can be actuated even when power to hydraulics is off.

⚠️ WARNING

To avoid serious injury or death:

- Do not alter implement or replace parts on the implement with other brands. Other brands may not fit properly or meet OEM (Original Equipment Manufacturer) specifications. They can weaken the integrity and impair the safety, function, performance, and life of the implement. Replace parts only with genuine OEM parts.

- Wear gloves and be careful when working around or with Disc blades. The blade cutting edge is sharp.

Tractor Maintenance

One of the most important things you can do to prevent hydraulic system problems is ensure that your tractor’s reservoir remains free of dirt and contamination.

Use a clean cloth to wipe hose ends before attaching them to your tractor. Replace your tractor’s hydraulic filter element at the prescribed intervals. These simple maintenance will go a long way to prevent occurrence of control valve and hydraulic cylinder problems.

IMPORTANT: Refer to Figure 5-1. Torque disc gang axle nuts to 500 ft. lbs. after the first initial 5 hours of operation. Not tightening the axle nuts may result in the nut becoming loose or lost resulting in possible damage to the axle and/or disc gang.

See note in Figure 1-6 on page 12: Use the extra washers provided with u-bolt hardware bag if an axle nut runs out of threads before the disc blades are tight on the axle.

Daily Operational Checks

1. Clean the unit of dirt and trash to minimize rusting and wear.

2. Visually inspect all nuts for tightness. Torque loose nuts to the torque value listed on page 38.

3. Inspect all bearings for wear. Replace any worn out bearings.

4. Lubricate unit as required. See Lubrication Points on page 31 for detailed lubrication information.

5. Replace any decals that are worn or damaged.
Long-Term Storage
Clean, inspect, service, and make necessary repairs to
the implement when storing it for long periods and at the
end of the season. This will help to ensure the unit is
ready for field use the next time you hook-up to it.

1. Clean off any dirt and grease that may have
accumulated on the Disc Harrow and moving parts.
Scrape off compacted dirt and then wash surface
thoroughly with a garden hose.
2. Inspect all nuts for tightness. Torque loose nuts to the
torque value listed on page 38.
3. Inspect all bearings for wear. Replace any worn out
bearings.
4. Clean dirt, oil, and grease from areas where paint
has been worn, chipped, or scratched. Prime bare
metal surfaces after cleaning and repaint to prevent
rust. Ask your dealer for Land Pride aerosol touch-up
paint. Paint is also available in touch-up bottles with
brush, quarts, and gallon sizes by adding TU, QT, or
GL to the end of the aerosol part number.
5. Replace any decals that are worn or damaged.
6. Lubricate Disc Harrow per the Lubrication Section
starting on page 31 to keep moisture out of moving
components. Be sure to lubricate Spring Adjuster
Tube as noted in the section to prevent moisture
from collecting in the bottom of the tube and freezing.
7. Spray cutting blades with a rust inhibitor or paint to
prevent rust.

Hitch Pivot Points

3 Zerks
Type of Lubrication: Multi-purpose Grease

Spring Adjuster Tube

1 Zerk
Type of Lubrication: Multi-purpose Grease
Add 2 to 3 pumps when needed to lubricate the threads and when storing your Disc Harrow for winter to keep moisture from collecting in the bottom of the tube and freezing.

Spring Washers

Spring Bearing Surfaces (2-places)
Type of Lubrication: Silicon Spray
Spray silicon on flat washers at both ends of springs to make turning spring adjuster easier.
**Section 5: Maintenance & Lubrication**

### Disc Gang Hanger Bearings

1 Zerk for every hanger bearing
Type of Lubrication: Multi-purpose Grease

### Axle Top Clamp Half

3 Zerks
Type of Lubrication: Multi-purpose Grease
Lower Disc Harrow until wheels are resting on the ground to relieve pressure on upper clamp halves before applying grease.

### Axle Bottom Clamp Half

3 Zerks
Type of Lubrication: Multi-purpose Grease
Raise Disc Harrow up until gangs are slightly off the ground to relieve pressure on lower clamp halves before applying grease.

### Wheel Hub

1 Zerk per wheel hub
Depending on which wheel you have, the zerk may be located inside the hub or outside the hub. See illustration.
Type of Lubrication: Multi-purpose Grease

</thead>
<tbody>
<tr>
<td>Disc Harrow makes a high center ridge.</td>
<td>Disc blades are moving too much soil to the center.</td>
<td>Tilt Disc Harrow up at the rear by turning spring adjuster counterclockwise. See “Front to Rear Leveling” on page 22. Set tractor draw bar in its lowest possible position by flipping the offset drawbar over. Decrease tractor speed. Increase spacing between disc gangs by moving all gang hangers on both sides away from the center equal amounts.</td>
</tr>
<tr>
<td>Disc Harrow cuts a furrow (valley) in the center.</td>
<td>Disc blades are not moving enough soil to the center.</td>
<td>Tilt Disc Harrow down at the rear by turning spring adjuster clockwise. Set tractor draw bar in its highest possible position. This can be done by flipping an offset drawbar over. Increase tractor speed. Reduce spacing between rear disc gangs by moving all gang hangers on both sides toward the center by equal amounts.</td>
</tr>
<tr>
<td>Disc Harrow makes ridges on the out side cuts and furrows just inside the ridges.</td>
<td>Too much soil is thrown out by the front disc gangs.</td>
<td>Check front to rear disc leveling. Raise front disc gangs with spring adjuster by turning it 2 or 3 revolutions clockwise. Reduce front disc gang angle by one position. Set tractor draw bar in its lowest possible position by flipping the offset drawbar over. Add disc furrow fillers to the rear disc gangs. See “Furrow Filler Assembly” on page 20.</td>
</tr>
<tr>
<td>Disc Harrow makes a furrow on the out side cuts and a ridge just inside the furrow.</td>
<td>Rear disc gangs are set too wide and picks up soil beyond where the front gangs throw it out.</td>
<td>Reduce spacing between rear disc gangs by moving all rear gang hangers in toward the center equal amounts. Raise front disc gangs by turning spring adjuster clockwise. Furrow fillers on the end of the rear disc gangs may be too large.</td>
</tr>
<tr>
<td>Disc Harrow does not pull straight and/or shifts from side to side.</td>
<td>Front disc gangs run deeper than the rear disc gangs.</td>
<td>Tilt Disc Harrow down at the rear by turning spring adjuster clockwise. Disc gangs are not centered on the frame. Center disc gangs on the Disc Harrow. Front disc gangs not at the same angle. Set Front disc gangs at the same angle. Rear disc gangs not at the same angle. Set Rear disc gangs at the same angle. Spring compressed length not set to the correct length. Set spring compressed length to 12 1/2&quot;.</td>
</tr>
<tr>
<td>Disc Harrow leaves a depression in the worked soil behind tractor wheels</td>
<td>Tire slippage, heavy tractor, soft soil conditions.</td>
<td>Add duals, increase tractor speed, increase gang angle and/or increase cutting depth. Tilt Disc Harrow down at the rear by turning spring adjuster clockwise.</td>
</tr>

Warranty

Land Pride warrants to the original purchaser that this Land Pride product will be free from defects in material and workmanship beginning on the date of purchase by the end user according to the following schedule when used as intended and under normal service and conditions for personal use.

Overall Unit: One year Parts and Labor
Hydraulic Cylinder: One year Parts and Labor.
Hoses and seals: Considered wear items.
Disc Blades: Considered wear items.

This Warranty is limited to the repair or replacement of any defective part by Land Pride and the installation by the dealer of any such replacement part, and does not cover common wear items. Land Pride reserves the right to inspect any equipment or parts which are claimed to have been defective in material or workmanship.

This Warranty does not apply to any part or product which in Land Pride’s judgment shall have been misused or damaged by accident or lack of normal maintenance or care, or which has been repaired or altered in a way which adversely affects its performance or reliability, or which has been used for a purpose for which the product is not designed. Misuse also specifically includes failure to properly maintain oil levels, grease points, and driveline shafts.

Claims under this Warranty should be made to the dealer which originally sold the product and all warranty adjustments must be made through an authorized Land Pride dealer. Land Pride reserves the right to make changes in materials or design of the product at any time without notice.

This Warranty shall not be interpreted to render Land Pride liable for damages of any kind, direct, consequential, or contingent to property. Furthermore, Land Pride shall not be liable for damages resulting from any cause beyond its reasonable control. This Warranty does not extend to loss of crops, any expense or loss for labor, supplies, rental machinery or for any other reason.

No other warranty of any kind whatsoever, express or implied, is made with respect to this sale; and all implied warranties of merchantability and fitness for a particular purpose which exceed the obligations set forth in this written warranty are hereby disclaimed and excluded from this sale.

This Warranty is not valid unless registered with Land Pride within 30 days from the date of purchase.

IMPORTANT: The Online Warranty Registration should be completed by the dealer at the time of purchase. This information is necessary to provide you with quality customer service.
